

KEERTHANA M

+ Bangalore, Karnataka | 7349449878 | keerthanam19092003@gmail.com | linkedin.com/in/keerthana-m-2b335933a

Technical Skills

Languages: Python, Java 17, C, SQL, MongoDB

Backend & APIs: Spring Boot, REST APIs, Postman, API Validation, Maven

Automation & Testing: n8n, Playwright, Pandas, CSV/Excel Automation, Page Object Model

Cloud & DevOps: AWS, Git, GitLab, CI/CD, Linux, Cloud Cost Optimization

Databases & Tools: MySQL, DBMS, Jira, VS Code, Networking

Experience

BOSCH

Technical Engineer | March 2025 – Present

- Built scalable n8n + GitLab automation for merging tracking and hotfix back-merge compliance, including dynamic branch/project handling, merge-request creation, status monitoring, auto-merge, and conflict alerts.
- Developed a reusable Playwright automation framework for product onboarding and regression testing using Page Object Model, CSV-driven data, reusable functions, and automated reports.
- Developed backend/API validation and product onboarding workflows for the USP marketplace, handling structured customer and product data.
- Supported AWS consumption posting operations, including API validation, billing reports, account analysis, and cloud cost tracking.
- Worked on AWS billing and invoice reconciliation, resolving consumption discrepancies and coordinating with stakeholders to improve reporting accuracy.
- Automated Excel-based data processing and reporting with Python/Pandas, reducing repetitive manual effort.

LARSEN & TOUBRO

Software Engineering Intern | Aug 2024 – Sep 2024

- Engineered an AFDX emulator in Debian Linux using Python socket programming and supported network communication testing.
- Automated network communication test scenarios and prepared technical documentation for the engineering workflow.

Projects

GitLab Hotfix Back-Merge Automation | *GitLab, n8n, REST APIs, Webhooks*

- Designed an end-to-end compliance workflow that detects merges to QA/Stage, determines back-merge targets dynamically, creates follow-up merge requests, monitors merge status, and routes unresolved conflicts for notification.

Playwright Product Onboarding Automation | *Python, Playwright, CSV, Page Object Model*

- Built reusable automation for Product Description, Product Details, Media & Documents, Pricing Plans, and Additional Details across multiple product categories with data-driven execution and failure reporting.

Jira Workflow Automation | *n8n, Jira APIs, REST APIs*

- Automated story validation, subtask processing, workflow transitions, and PI-related updates to reduce repetitive Jira operations and improve process consistency.

Cloud Consumption | *Python, Pandas, AWS, Excel, APIs*

- Automated consumption-data processing, customer/account analysis, billing reporting, and validation workflows for IN and EU regions, supporting cloud cost visibility and reconciliation.

Vehicle Audit / OCR Automation | *Python, Excel, OCR, Automation*

- Automated retrieval of vehicle and OCR image links into audit sheets and defined an AI-assisted validation flow for numberplate, vehicle-visibility, and FASTag checks, with manual review focused on exceptions.

Dysphonic Speech Enhancement | *Python, ANN/CNN/DNN, Deep Learning*

- Developed neural-network models for dysphonic speech analysis, achieving 97% prediction accuracy in project evaluation.

Certifications

- | | | |
|-----------------------|-------------------------------|--------------------------------|
| • AWS DevOps Engineer | OCI Generative AI | NPTEL DBMS |
| • NPTEL DSA | Python OOP Automation (Udemy) | SQL for Analytics (Solo learn) |

Education

JSS SCIENCE AND TECHNOLOGY UNIVERSITY (SJCE) | B.E. Electronics & Instrumentation Engineering

Mysuru

CGPA: 8.5/10
